* Test window dates are fixed, and may not correspond to the beginning/ending dates of your school year. Students will only have Window Specific SGPs calculated if they have taken at least two tests, and the date of the *most recent test* has to be within the past 18 months.

The Window Specific SGP is calculated using at least two tests: the most-recently taken test in the past 18 months, and one test from a prior test window. If *more* than one test was taken in a test window, the test used for the calculations will be the following:

- —————> ● Two tests used to calculate SGP
- Test in window, but *skipped* when calculating SGP
- - - - - -> Third test used to calculate SGP (if available)

Test Window is	The test used for Window Specific SGP Calculation	
Fall Window	First test taken in the window	● — ○
Winter Window	Test taken closest to 1/15 (red line)	● — ○
Spring Window	Last test taken in the window	○ — ●
